

FITTING

This table indicates the correspondence between the sizes and the measurements in **inches** of your body. To determine the most suitable size we have to measure on the naked body, ensuring that the tape measure adheres perfectly to the skin without squeezing.

HOW TO MEASURE

- A** Standing up, under the lower armpit breathing normally (the circumference of the chest)
- B** Standing up, around the naval (the circumference of the stomach)
- C** Standing up, with the arm at 90°, measure from the outside bone from the shoulder to the wrist.
- D** Standing up, at the hip bone, (the circumference of the waist)
- E** Standing up, the inside leg measurements (to the ankle)

*It is advisable not to take oneself measures
